Advances and trends in nutraceutical and functional plant-based food Light Metals 2015 Ecology and Physiology of Nitrification Advancing Culturally Responsive Research and Researchers Marine Enzymes and Specialized Metabolism - PF Index and Technical Digest Food Safety and Foodborne Pathogen – A Global Perspective on the Diversity, Combating Multidrug Resistance and Management New Terrains for Familiar Places Translational Advances in Alzheimer's, Parkinson's, and other Dementia: Molecular Mechanisms, Biomarkers, Diagnosis, and Therapies, Volume II The Evolution of Biomineralization in Metazoans Cranial Placodes and Neural Crest Interactions in Craniofacial Development Spherical Nucleic Acids Engineering Mathematics Volume III (Linear Algebra and Vector Calculus) (For 1st Year, 2nd Semester of JNTU, Kakinada) Celebrating 5 Years of Avian Physiology in Frontiers in Physiology Unconventional Animal Models in Infectious Disease Research Fission-Track Thermochronology and its Application to Geology Harmful Algal Blooms (HABs) in Latin America Socio-Ecology of Microbes in a Changing Ocean Industrial and health applications of lactic acid bacteria and their metabolites, Volume II Toward a Process Approach in Psychology Data Envelopment Analysis Bioleaching and Biocorrosion: Advances in Interfacial Processes Desertification and Rehabilitation The World Bank's Lawyers The Two of Swords: Part Seventeen Marine Anti-inflammatory Agents 2020 Quorum Network (Sensing/Quenching) in Multidrug-Resistant Pathogens Higher-Order Computability Biotrophic Plant-Microbe Interactions Advances in Plant Meiosis: From Model Species to Crops Jerusalem and Babylon Stem Cells and Progenitor Cells in Ischemic Stroke - Fashion or Future? Metabolic Regulation in the Development of Cardiovascular Diseases From Functional Genomics to Biotechnology in Ornamental Plants Tracking the Deep Biosphere through Time Fox and McDonald's Introduction to Fluid Mechanics Neovascularization, Angiogenesis and Vasculogenic Mimicry in Cancer The Everything Giant Book of Word Searches, Volume 10 Flight Dynamics Advancements in the Understanding of Anthropogenic Impacts on the Microbial Ecology and Function of Aquatic Environments

the findings of the contributed studies from this research topic reflect important aspects hot topics of quorum network sensing quenching in multidrug resistant pathogens which including i novel mechanisms of qs and detection techniques ii qs qq in clinical multidrug resistant strains iii the relationship between qs qq as well as multidrug resistance and iv the application of new qq therapies deep biosphere research is at the scientific frontier of bio and geo related sciences yet it is largely underexplored in terms of volume deep subsurface settings represent some of the largest microbial habitats on the planet and the combined biomass of the deep biosphere encompasses the largest living reservoir of carbon excluding land plants however the paleo record of the deep biosphere is still largely uncharted and neglected the aim of this book is to highlight current research on deep life through time and bring together researchers with various perspectives the book presents a collection of scientific contributions that provide a sample of forefront research in this field the contributions involve a range of case studies of deep ancient life in continental and oceanic settings of microbial diversity in sub seafloor environments and of the isolation of calcifying bacteria as well as reviews on clay mineralization of fungal biofilms and on the carbon isotope records of the deep biosphere deciphering the fossil record of the deep biosphere is a challenging task but when successful will unlock doors to life s cryptic past flight dynamics takes a new approach to the science and mathematics of aircraft flight unifying principles of aeronautics with contemporary systems analysis while presenting traditional material that is critical to understanding aircraft motions it does so in the context of modern computational tools and multivariable methods robert stengel devotes particular attention to models and techniques that are appropriate for analysis simulation evaluation of flying qualities and control system design he establishes bridges to classical analysis and results and explores new territory that was treated only inferentially in earlier books this book combines a highly accessible style of presentation with contents that will appeal to graduate students and to professionals already familiar with basic flight dynamics dynamic analysis has changed dramatically in recent decades with the introduction of powerful personal computers and scientific programming languages analysis programs have become so pervasive that it can be assumed that all students and practicing engineers working on aircraft flight dynamics have access to them therefore this book presents the principles derivations and equations of flight dynamics with frequent reference to matlab functions and examples by using common notation and not assuming a strong background in aeronautics flight dynamics will engage a wide variety of readers introductions to aerodynamics propulsion structures flying qualities flight control and the atmospheric and gravitational environment accompany the development of the aircraft s dynamic equations the avian physiology section is now five years old this special e book is to commemorate this event for this highlights issue celebrating the first five years of the avian physiology section it was decided to focus on the top papers reviews published table 1 lists the top fifteen papers reviews based on either views or down loads as a pdf there is some agreement between the two lists what is compelling is that of the top papers all except one encompasses research conducted in domesticated birds predominantly with chickens with one focused on turkeys it is perhaps not unexpected that research on chickens dominates the top papers because of the following chickens are commercially important being the number one meat animal globally chickens are used as the model species for birds other possibilities that could be the case include the following there are more researchers working on chickens compared to other commercial or wild species there are other avenues to publish wild bird research lack of funding for open access article processing charges the exceptions to the chicken papers reviews is a paper on a passerine bird the migratory blackheaded bunting emberiza melanocephala singh et al 2018 and a review paper focused on turkey satellite cell proliferation and differentiation velleman and song 2017 of the top papers reviews six were related to muscle physiology bottje et al 2017 greene et al 2019 lassiter et al 2019 lin et al 2017 piekarski et al 2020 velleman and song 2017 these papers address different aspects of the physiology of muscle functioning and development in chickens or turkeys specifically the following small mas from the transcribed from mitochondrial genome in muscle bottje et al 2017 leptin induced autophagy of muscle cells piekarski et al 2020 proliferation and differentiation of myoblasts influence of myodec 4 and glypican 1 velleman and song 2017 myostatin signaling and muscle growth lassiter et al 2019 the role of growth factors and signal transduction pathways in myoblast proliferation lin et al 2017 muscle pathology specifically woody breast myopathy greene et al 2019 there are also among the top papers reviews on multiple diverse other organs and systems namely the following adipose tissue abdalla et al 2018 bone adhikari et al 2019 feathering chen et al 2019 gastro intestinal functioning microbiome li et al 2018 kraimi et al 2018 rodrigues et al 2020 immune functioning bi et al 2018 wei et al 2018 kidneys li et al 2018 liver flees et al 2017 singh et al 2018 endogenous opioids scanes and pierzchala koziec 2018 photoperiodism hanlon et al 2020 pituitary gland zhang et al 2021 and reproduction eusemann et al 2018 li et al 2018 the geographical distribution of the top papers is interesting as summarized in table 2 the united states of america and the people s republic of china were the country of origin of most of the papers in addition there were papers reviews from europe france germany and a collaborative paper between researchers in the usa and poland and india of the top papers reviews from the usa six come from a single department namely the department of poultry science center of excellence for poultry science university of arkansas bottje et al 2017 flees et al 2017 green et al 2019 lassiter et al 2019 piekarski et al 2020 rodrigues engineering mathematics a question raised by many individuals today how safe is our food consumed today food safety has become a hot topic and an important public issue due to the increasingly widespread nature of foodborne illnesses in both developed and developing countries as food is biological in nature and supplies consumers with nutrients it is also equally capable of supporting the growth of microorganisms from the environmental sources a precise method of monitoring and detecting of foodborne pathogens including salmonella sp vibrio sp listeria monocytogenes campylobacter and norovirus is needed to prevent and control human foodborne infections clinical treatments of infection caused by foodborne pathogens are becoming tougher with the increase number of multidrug resistant pathogens in the environment this situation creates a huge healthcare burden e g prolonged treatment for infections decrease in the efficacy of antibiotic delay in treatment due to unavailability of new antibiotics and increased number of deaths as such continuous investigation of the foodborne pathogens is needed to pave the way for a deeper understanding on the foodborne diseases and to improve disease prevention management and treatments the world bank s lawyers provides an original socio legal account of the evolving institutional life of international law informed by oral archives months of participant observation interviews legal memoranda and documents obtained through freedom of information requests it tells a previously untold story of the world bank s legal department between 1983 and 2016 this is a story of people and the beliefs they have the influence they seek and the tools they employ it is an account of the practices they cling to and how these practices gain traction or how they fail to do so in an international bureaucracy inspired by actor network theory relational sociologies of association and performativity theory this ethnographic exploration multiplies the matters of concern in our study of international law and lawyering the human and non human material and semantic visible and evasive actants that tie together the fragile fabric of legality in tracing these threads this book signals important changes in the conceptual repertoire and materiality of international legal practice as liberal ideals were gradually displaced by managerial modes of evaluation it reveals a world teeming with life a space where professional postures and prototypes aesthetic styles and technical routines are woven together in law s shifting mode of existence this history of international law as a contingent cultural technique enriches our understanding of the discipline s disenchantment and the displacement of its traditional tropes by unexpected and unruly actors it thereby inspires new ways of critical thinking about international law s political pathways promises and pathologies as its language is inscribed in ever evolving rationalities of rule socio ecological interactions between microbes and associated organisms are integral elements of marine ecosystem dynamics this research topic combines sixteen papers on interactions across the major domains of marine life including prokaryotes phytoplankton macroalgae cnidarians viruses and fungi these studies offer exciting insights into microbial cooperation and competition holobiont ecology interkingdom signaling chemical microdiversity and biogeography understanding such network processes is essential for the interpretation of ecosystem functioning and biogeochemical events particularly in the wake of climate change this ebook is a collection of articles from a frontiers research topic frontiers research topics are very popular trademarks of the frontiers journals series they are collections of at least ten articles all centered on a particular subject with their unique mix of varied contributions from original research to review articles frontiers research topics unify the most influential

researchers the latest key findings and historical advances in a hot research area find out more on how to host your own frontiers research topic or contribute to one as an author by contacting the frontiers editorial office frontiersin.org about contact this handbook represents a milestone in the progression of data envelopment analysis dea written by experts who are often major contributors to dea theory it includes a collection of chapters that represent the current state of the art in dea research topics include distance functions and their value duals cross efficiency measures in dea integer dea weight restrictions and production trade offs facet analysis in dea scale elasticity benchmarking and context dependent dea fuzzy dea non homogenous units partial input output relations super efficiency treatment of undesirable measures translation invariance stochastic nonparametric envelopment of data and global frontier index focusing only on new models approaches of dea the book includes contributions from juan aparicio mette asmild yao chen wade d cook juan du rolf färe julie harrison raha imanirad andrew johnson chiang kao abolfazi keshvari timo kuosmanen sungmook lim wenbin liu dimitri margaritis reza kazemi matin ole b olesen jesús pastor niels chr petersen victor v podinovski paul rouse anti saastamoinen biresh k sahoor kaoru tone and zhongbao zhou marine enzymes and specialized metabolism part a volume 604 highlights experimental methods on diverse marine enzymes involved in the construction of bioactive natural product molecules these detailed protocols are written by experts who actively study and apply marine enzymes in biosynthesis and biotechnology comprehensive chapters in this latest release cover chemoenzymatic synthesis of starting materials and characterization of halogenases requiring acyl carrier protein tethered substrates assaying biradical aryl coupling activity of cyp450 enzymes the characterization and application of marine microbial omega 3 polyunsaturated fatty acid synthesis catalase related allene oxide synthase on a biosynthetic route to fatty acid cyclopentenones haloalkane dehalogenases from marine microorganisms and more presents comprehensive information on a subject not widely covered in other method book contains the authority and expertise of recognized and celebrated contributors for centuries plants of a broad taxonomical background have been bred and commercialized because of the beauty of their flowers however until recently genomic analyses of ornamentals remained a challenge because of their large genome sizes and high ploidy levels in the last decade increasingly affordable sequencing technologies and powerful bioinformatic approaches resulted in the complete sequencing of several horticultural species genomes and the characterization of their transcriptomes these developments enabled research on many challenging topics this research topic gives you a primer into them by featuring a broad range of original research contributions on some of the most active areas of ornamental plant research the genetic basis of flower morphology scent and color the genetic regulation of physiology as well as the epigenetic factors affecting vegetative development in this context one of the most significant hurdles to functional genetic studies in ornamentals is achieving efficient genetic transformation several articles in this research topic describe strategies to tackle this challenge and present insights into the way transgene activity renders novel flower phenotypes this dissertation seeks to expand a framework for families engaged in educational changemaking that emphasizes relational ontological axiological and epistemological commitments to desettling bang et al 2012 partnership and pedagogy this dissertation centers relationality as a core construct that knits social and ecological challenges with educational inequities which disproportionately impact the collective continuance of nondominant students families and communities whyte 2013 binary and divisive politics undergird much of education content and pedagogy and educational partnerships with families and communities in ways that inauthentically and inequitably place burden and blame upon families particularly nondominant families to solve such challenges baquedano lópez et al 2013 wilson et al 2019 as educational reform efforts including and especially research endeavors seek to engage and partner with diverse students and families it is necessary to better articulate and anticipate how our processes encounter reflect refuse and revive diverse ways of being knowing and caring this dissertation explores how binaries quietly operate bang et al 2014 in and across efforts to engage families in educational changemaking as well as how relational commitments may be cultivated to rupture and subvert binary politics for collective wellbeing and educational justice in a process of desettling this dissertation infuses critical family engagement research ishmaru et al 2019 ishmaru et al in prep with insights from sociocultural e g Gutiérrez rogo 2013 situated e g lave wenger 2001 bang 2015 and cultural historical theories of human learning e g engeström 2001 as connected to social changemaking further i draw upon indigenous and land based theories to ground the concept of relationality in ways that re orient to places lands waters and more than human others as consequential to learning and socio ecological changemaking bang et al 2016 cajete 2000 calderon 2014 simpson 2014 smith 2013 this dissertation utilizes micro ethnographic methods erickson 1996 knowledge in interaction analysis kia methods disessa et al 2015 jordan henderson 1995 and qualitative content analysis methods merriam tisdell 2016 schreier 2014 to analyze data collected through co design activities across two larger participatory design research projects across three distinct empirical papers i build out a framework for axio onto relationality in families engaged in educational changemaking the first paper examines the conceptual contours of relational and divisive conceptions about families that emerged in social changemaking work across intracultural communities in a participatory design research project called family leadership design collaborative ishmaru bang 2016 the second paper further explores conceptions of families engaged in education as manifest in design processes and materials and in moments of place based co design with educators families and community members in a participatory design project called learning in places finally the third paper examines how the conceptual propositions driving the design of families engaged in science learning described in paper 2 were concretized in family knowledge and practice sharing tools i e homework as well as the range of socio ecological knowledges and practices of families that were elicited from use of such tools in practice i close with a reflection on axio onto epistemic relationality across the papers and synthesize key implications for co design theory and practice stroke remains one of the most devastating diseases in industrialized countries recanalization of the occluded arterial vessel using thrombolysis is the only causal therapy available however thrombolysis is limited due to severe side effects and a limited time window as such only a minority of patients receives this kind of therapy showing a need for new and innovative treatment strategies although neuroprotective drugs have been shown to be beneficial in a variety of experimental stroke models they ultimately failed in clinical trials consequently recent scientific focus has been put on modulation of post ischemic neuroregeneration either via stimulation of endogenous neurogenesis or via application of exogenous stem cells or progenitor cells neurogenesis persists within the adult brain of both rodents and primates as such neural progenitor cells npcs are found within distinct niches like the subventricular zone svz of the lateral ventricles and the subgranular zone of the dentate gyrus cerebral ischemia stimulates these astrocyte like progenitor cells upon which npcs proliferate and migrate towards the site of lesion there npcs partly differentiate into mature neurons without significantly being integrated into the residing neural network rather the majority of new born cells dies within the first weeks post stroke leaving post ischemic neurogenesis a phenomenon of unknown biological significance since npcs do not replace lost brain tissue beneficial effects observed in some studies after either stimulated or protected neurogenesis are generally contributed to indirect effects of these new born cells the precise identification of appropriated cellular mediators however is still elusive how do these mediators work are they soluble factors or maybe even vesicular structures emanating from npcs what are the cues that guide npcs towards the ischemic lesion site how can post ischemic neurogenesis be stimulated how can the poor survival of npcs be increased in order to support post ischemic neurogenesis a variety of research groups have focused on application of exogenous stem progenitor cells from various tissue sources among these cultivated npcs from the svz and mesenchymal stem cells msccs from the bone marrow are frequently administered after induction of stroke although neuroprotection after delivery of stem progenitor cells has been shown in various experimental stroke models transplanted cells are usually not integrated in the neural network again the vast amount of grafted cells dies or does not reach its target despite profound neuroprotection also suggesting indirect paracrine effects as the cause of neuroprotection yet the factors being responsible for these observations are under debate and still have to be addressed is there any optimal cell type for transplantation how can the resistance of grafted cells against a non favorable extracellular milieu be increased what are the molecules that are vital for interaction between grafted cells and endogenous npcs the present research topic seeks to answer at least in part some of the aforementioned questions although the research topic predominantly focuses on experimental studies and reviews alike a current outlook towards clinical relevance is given as well spherical nucleic acids snas comprise a nanoparticle core and a densely packed and highly oriented nucleic acid shell they have novel structure dependent properties that differ from those of linear nucleic acids and that makes them useful in chemistry biology the life sciences medicine materials science and engineering this book is a reprint volume that compiles 101 key papers that have been published by the mirkin group at northwestern university usa and their collaborators over the past more than two decades volume 1 provides an overview and a historical framework of snas and discusses their enabling features which set them apart from all other forms of matter volume 2 covers the general design rules for colloidal crystal engineering with dna spanning the building blocks and dna and rna based programmable bonds that can be utilized in preparing such structures volume 3 continues the discussion of colloidal crystallization processes and routes to hierarchical assembly featuring dynamic nanoparticle superlattices and lattices prepared on surfaces or via templating strategies and explores what one can uniquely learn from and do with colloidal crystals prepared from nucleic acid functionalized nanomaterials in optics plasmonics and catalysis volume 4 covers the role of snas in biomedicine especially as diagnostic probes both inside and outside of cells and treatments based on gene regulation and immunotherapy throughout their life plants interact with all sorts of microbes some of these are detrimental and cause disease some interactions are mutually beneficial for both partners it is clear that most if not all of the interactions are regulated by highly complex checks and balances sustained by signalling and exchange of messengers and nutrients the interactions where both partners are alive for a significant part of their time together are called biotrophic in this e book we bring together 33 articles representing the current state of the art in research about diverse biotrophic plant microbe associations aimed at describing and understanding how these complex and ubiquitous partnerships work and ultimately support much of the land based biosphere enjoy these 300 engaging fun word search puzzles full of diverse themes to satisfy every interest in this enormous collection from the popular everything series if you re an avid pencil puzzler you ll be delighted by the everything giant book of word searches volume 10 the latest collection from puzzlemaster charles timmerman is packed with more than 300 brand new word search puzzles that feature fun and engaging themes including geography and travel visit bangkok around montana honeymoon games and hobbies backgammon fun camping adventure kite flying popular television funny actresses ads on tv watching game of thrones food and drink coffee connoisseur recipe books love to cook nature and animals all about fish around the zoo nature study history and politics ancient times state governors remembering watergate music woodstock festival rolling stones fan about michael jackson you ll also get a great mental workout word puzzles help improve your memory vocabulary and problem solving skills with this huge collection you ll always find the perfect puzzle to suit your mood through ten editions fox and mcdonald s introduction to fluid mechanics has helped students understand the physical concepts basic principles and analysis methods of fluid mechanics this market leading textbook provides a balanced systematic approach to mastering critical concepts with the proven fox mcdonald solution methodology in depth yet accessible chapters present governing equations clearly state assumptions and relate mathematical results to corresponding physical behavior emphasis is placed on the use of control volumes to support a practical theoretically inclusive problem solving approach to the subject each comprehensive chapter includes numerous easy to follow examples that illustrate good solution technique and explain challenging points a broad range of carefully selected topics describe how to apply the governing equations to various problems and explain physical concepts to enable students to model real world fluid flow situations topics include flow measurement dimensional analysis and similitude flow in pipes ducts and open channels fluid machinery and more

to enhance student learning the book incorporates numerous pedagogical features including chapter summaries and learning objectives end of chapter problems useful equations and design and open ended problems that encourage students to apply fluid mechanics principles to the design of devices and systems advancing culturally responsive research and researchers qualitative quantitative and mixed methods encourages readers to design and engage in methodologies and methods that place cultural relevancy at the center of inquiry in doing so it highlights the need to uplift voices and needs of people who have been historically marginalized in the environments that we both inhabit and engage in as part of knowledge construction the scholars whose work is featured in this volume take up research from different paradigmatic ontological epistemological axiological and methodological approaches yet with adherence to centering cultural responsiveness in all research decisions each chapter seeks to extend understandings of social inequities methodologies and or methods and to contribute to meaningful and evolving social change through innovative and cutting edge research strategies while doing this work the authors illustrate and highlight the importance of researcher positions and reflexivity in supporting the expansion of culturally responsive approaches they also do so while considering global sociopolitical conditions of this moment in time the contributions to this volume were initially presented at the first biennial advanced methods institute in 2021 the institute was hosted by quallab in the ohio state university s college of education and human ecology and shared this volume s thematic focus as a handbook the volume can help faculty and advanced researchers with interest in doing culturally responsive projects to better understand frameworks approaches and considerations for doing so it includes activities to support readers in developing said understandings this special issue covers original and innovative basic research regarding the anti inflammatory potential of several classes of secondary metabolites i e polyphenols phytosterols proteoglycans and polysaccharides in manifestations of acute and chronic inflammation in both in vitro and in vivo experimental models the 2015 collection will include papers from the following symposia alumina and bauxite aluminum alloys fabrication characterization and applications aluminum processing aluminum reduction technology cast shop for aluminum production electrode technology for aluminum production strip casting of light metals culture and dialogue is an international peer reviewed journal of cross cultural philosophy and the arts that is published semi annually both in print and electronically the journal seeks to encourage and promote research in the type of philosophy and theory that sees dialogue as a fundamental ingredient of cultural formations that is to say the ways cultures become apparent and ultimately identifiable why are we fighting this war because evil must be resisted and sooner or later there comes a time when men of principle have to make a stand because war is good for business and it s better to die on our feet than live on our knees because they started it but at this stage in the proceedings he added with a slightly lop sided grin mostly from force of habit a soldier with a gift for archery a woman who kills without care two brothers both unbeatable generals now fighting for opposing armies no one in the vast and once glorious united empire remains untouched by the rift between east and west and the war has been fought for as long as anyone can remember some still survive who know how it was started but no one knows how it will end this serial novel from the world fantasy award winning k j parker is the story of a war on a grand scale told through the eyes of its soldiers politicians victims and heroes the first three parts of the two of swords will arrive in april 2015 with further installments to be released monthly this is the seventeenth installment in the two of swords serialization this book is focused on the basics of applying thermochronology to geological and tectonic problems with the emphasis on fission track thermochronology it is conceived for relatively new practitioners to thermochronology as well as scientists experienced in the various methods the book is structured in two parts part i is devoted to the fundamentals of the fission track method to its integration with other geochronologic methods and to the basic principles of statistics for fission track dating and sedimentology applied to detrital thermochronology part i also includes the historical development of the technique and thoughts on future directions part ii is devoted to the geological interpretation of the thermochronologic record the thermal frame of reference and the different approaches for the interpretation of fission track data within a geological framework of both basement and detrital studies are discussed in detail separate chapters demonstrate the application of fission track thermochronology from various perspectives e g tectonics petrology stratigraphy hydrocarbon exploration geomorphology with other chapters on the application to basement rocks in orogens passive continental margins and cratonic interiors as well as various applications of detrital thermochronology psychological science constructs much of the knowledge that we consume in our everyday lives this book is a systematic analysis of this process and of the nature of the knowledge it produces the authors show how mainstream scientific activity treats psychological properties as being fundamentally stable universal and isolable they then challenge this status quo by inviting readers to recognize that dynamics context specificity interconnectedness and uncertainty are a natural and exciting part of human psychology these are not things to be avoided and feared but instead embraced this requires a shift toward a process based approach that recognizes the situated time dependent and fundamentally processual nature of psychological phenomena with complex dynamic systems as a framework this book sketches out how we might move toward a process based praxis that is more suitable and effective for understanding human functioning this book offers a self contained exposition of the theory of computability in a higher order context where computable operations may themselves be passed as arguments to other computable operations the subject originated in the 1950s with the work of kleene kreisel and others and has since expanded in many different directions under the influence of workers from both mathematical logic and computer science the ideas of higher order computability have proved valuable both for elucidating the constructive content of logical systems and for investigating the expressive power of various higher order programming languages in contrast to the well known situation for first order functions it turns out that at higher types there are several different notions of computability competing for our attention and each of these has given rise to its own strand of research in this book the authors offer an integrated treatment that draws together many of these strands within a unifying framework revealing not only the range of possible computability concepts but the relationships between them the book will serve as an ideal introduction to the field for beginning graduate students as well as a reference for advanced researchers
